ASPIRATOR AND MEASURE

combined, as devised by H. L. GREVILLE, Esq., for the estimation of CS₂, SH₂, and CO₂ by the Harcourt Test. Complete, 19s. 6d.; if enamelled at back of graduations, £1 2s. 6d. In the old, well-known method an opaque aspirator is employed which prevents the operator from seeing the accuracy of the water level.

The GREVILLE'S ASPIRATOR

is constructed entirely of glass, and the graduations are in fractions of a cubic foot. The measurement of gas employed, and the means of ascertaining the volume used, can be accurately obtained, and the testing can be done in a far shorter period than by using the old form of apparatus.

"ASTRONOMY FOR EVERYBODY," a popular exposition of the wonders of the Heavens, by SIMON NEWCOMB, LL.D.

Sir Robert S. Ball, LL.D., in introducing Professor Newcomb to English readers refers to him as "our leading authority on certain most difficult branches of Mathematical Astronomy, and other parts of the same science."

Sir ROBERT BALL recommends "Astronomy for Everybody" as the best book to be put into the hands of a beginner who desires to learn something of the heavens.

The volume is Demy 8vo. in size, gilt edges, sumptuously illustrated, and handsomely bound.
